

ConAn

Typeset Conversation Analysis

Clemens Horch

February 1, 2015

1 Examples

Example 1 is a numbered conversation analysis example:

```
(1)      1 Anton: Lorem ipsum dolor sit amet, consetetur sadipscing elitr,  
          2          sed diam nonumy eirmod tempor invidunt ut labore et dolore  
→       3          magna aliquyam erat, [ sed diam ] voluptua.  
          4 Zita:          ero eos et
```

`conan` environments can easily be mixed with `example` environments from the `covington` package. Both use the equation counter for numbering.

(2) Covington Example

The next example is a `conan*` environment without numbering and custom line numbers.

```
2345 A: Lorem ipsum dolor sit amet, consetetur sadipscing elitr,  
2346     sed diam nonumy eirmod tempor invidunt ut labore et dolore  
2347     magna aliquyam erat, [ sed diam ] voluptua.  
2348 B:          ero eos et
```

It is recommended to use ConAn with the `conan.py` preprocessor. (3) is an example for an automatically processed file.

```
(3)      1 Anton: Lorem ipsum dolor sit amet, consetetur sadipscing elitr,  
          2          sed diam nonumy eirmod tempor invidunt ut labore et  
          3          dolore magna aliquyam erat, [ sed diam ] voluptua. Lorem =  
          4 Zita:          ero eos et  
→       5          = ipsum dolor sit amet, consetetur sadipscing elitr, sed  
          6          diam nonumy eirmod tempor invidunt.
```
