ConAn

Typeset Conversation Analysis

Clemens Horch

January 31, 2015

1 Examples

Example 1 is a numbered conversation analysis example:

(1) 1 Anton: Lorem ipsum dolor sit amet, consetetur sadipscing elitr,
     2   sed diam nonumy eirmod tempor invidunt ut labore et dolore
     3   magna aliquyam erat, [sed diam] voluptua.
     4 Zita: ero eos et

   `conan` environments can easily be mixed with `example` environments from the `covington` package. Both use the equation counter for numbering.

(2)   Covington Example

   The next example is a `conan*` environment without numbering and custom line numbers.

```
2345  Anton: Lorem ipsum dolor sit amet, consetetur sadipscing elitr,
2346         sed diam nonumy eirmod tempor invidunt ut labore et dolore
2347         magnaaliquyam erat, [ sed diam  ] voluptua.
2348  Zita:                        ero eos et
```

   It is recommended to use ConAn with the conan.py preprocessor. (1001) is an example for an automatically processed file.

(1001) 1 Anton: Lorem ipsum dolor sit amet, consetetur sadipscing elitr,
       2   sed diam nonumy eirmod tempor invidunt ut labore et
       3   dolore magna aliquyam erat, [sed diam] voluptua. Lorem =
       4 Zita: ero eos et
       5   = ipsum dolor sit amet, consetetur sadipscing elitr, sed
       6   diam nonumy eirmod tempor invidunt.
